

Catching the Rain

By Sophie Braccini

Gutter door

It is one of Deva Rajan's simple pleasures to collect rainwater from the gutters that have been cleaned by the winter showers, and to make tea with it. "What better use of the rain water can one make?" asks the Canyon resident. At the other end of the scale of rain catchment, Canyon Construction, the developer that restored the Moraga Barn, collects 15,000 gallons of rain water every winter in three concrete tanks buried on its premises, "that's enough to sustain 100% of our landscaping over the whole season," says Chris Avant, the company's president. And in the middle of the scale, residents like Andy Scheck, the publisher of the Lamorinda

Weekly, use home-made systems to make the best possible use of the water that falls from our skies.

"When I came here from Germany, I was very surprised to notice that no one was collecting water from their gutters," says Scheck, "there, it is standard to have an outlet where the gutter comes down. Not everybody uses it, but the possibility is always there." Scheck decided to construct his own gutter-door in order to catch the winter rain. He first made a paper model for the door and cut an opening in the gutter; he then built a door, which is now attached to the gutter, from a sheet of metal. "I have a piece of pipe that I attach to the door to fill a large can located on the side of the house," he says, "once the first can is full, another pipe conducts the water to the next can."

Scheck's system does not have the storage capacity to fully meet his landscape watering needs, but the collected water is used from September to April and it somewhat reduces his water bill for the whole year.

Suzanne Jones, on the other hand, has a 10,000 gallon storage tank that catches enough water to maintain her native plant garden year round. When we remodeled our house, we buried a stainless steel tank under the deck," says the Bollinger Canyon resident, "it is connected to half of our gutters." Jones was able to locate a Santa Rosa company that was ready to sell her the

Concrete tanks were buried by "The Barn" at the time of its renovation.
