

Life on the Creeks

...continued from page D1

Al Steuber shows where the creek erodes the bank in his garden

In this setting, property owners own both sides of the creek. Forty years ago, their neighbor decided that it was wasted space and built a culvert with the advice of the United States Army Corps of Engineers, and flattened the whole backyard; a rare move for someone with a creek, but that has proven quite harmless to the property.

This radical way of controlling a creek is rare for individual homeowners, but according to Spittler, it was done extensively when the cities were developed. He still remembers the Orinda creeks he played in with his friends that now run through concrete tunnels under shopping centers or freeways.

As far as homeownership is concerned, maintenance of the creeks mostly means stabilizing the banks. "You can see that where the creek turns, the outside bank gets eroded much more quickly," says Lafayette resident Al Steuber (Virginia's father-in-law) pointing to a portion of the year-round creek that borders his property. The natural tendency of the creek would be to go straight, so especially when the volume of water is high, consistently hitting that curb slowly erodes the side. Planting native trees so roots hold the bank and in-

stalling large rocks on the side are some things that help. That's what Klippert did and in the process, he opened a beautiful area in his backyard.

Once nature is stabilized and hopefully controlled, the fun part of integrating the natural water feature into the garden begins. The Prestons in Moraga had a non-accessible bank riddled with ivy and blackberry. "We didn't 'discover' the creek until we were remodeling in 1999," remembers Bobbie Preston. From the start the Prestons wanted to restore and use their side of the creek the natural way.

"We had 30-plus truckloads of tree chips dumped on the hillside to create a plantable area," she says. "The Watershed Creeks Council helped us replant the creek side with natives such as nine-bark, flowering currant and willow, and we also added Cleveland sage, and California fuchsia." Tom Preston built the stairs, terraces and decks that are used by the three generations who come to their home. "He used recycled wood from our neighbors' fence for the terrace, bricks from our old fireplace for the path," says Preston. The result is charming.

What Spittler did with his ephemeral

A simple flight of stairs built by Tom Preston accesses the creek bank planted with native grasses.

creek is equally appealing, offering to the eye and the meditative visitor a natural oak and pine woodland where local wildlife loves to come.

The Lebermans in Orinda also rave about the uniqueness of having a creek on their property. Their challenge is that they must cross the creek and a bridge shared by three homes to reach their house. "We rebuilt it together five years ago," explains

Susan Leberman. "It was quite a project, but you don't want to end up with your car at the bottom of the creek." The Libermans have a second pedestrian bridge on their property.

All these homeowners agree that having a natural water feature in your yard is as wonderful as the abundance of wildlife that comes with it – whether they are owls and bats, or deer and raccoons.

Natural beauty abounds in backyard creeks.
