“The heating process introduces clean, dry heat into a structure, gradually increasing the temperature until the inside temperature is between 140 and 150 degrees and the wood core reaches 120 degrees,” he explained, “Technicians then maintain the temperature at or above that level for 1.5 hours to ensure a complete kill. The entire procedure may be completed in as little as 8 hours.”

The training day was a huge success, offering many chemical-free pest control strategies.

“We had 71 registrants and it is very encouraging to see so many experts in the field of pest control providing options that work well, are cost effective, and safer than using poison,” said JunFish, “We hope that residents and businesses, as well as public agencies would look at our web site to get resources and get started.”

PFSE is raising funds to be able to assist schools and cities that want to adopt alternative methods of pest control. For more information, visit pfse.net.
