Scientific research notes that the monarch butterflies are at critically low levels in western states because of destruction to their milkweed habitat along their migratory route as human housing expands into their territory and use of pesticides and herbicides increases.

Moraga falls within the western monarch's critical "coastal range," and as such it can provide a nectar and larvae host habitat. It is important to plant milkweed species that are native to California, keeping in mind that it takes one year for the plants to establish themselves and two to three years for them to bloom.

The Moraga Garden Club is establishing a certified monarch waystation at the Rancho Laguna Park with construction having recently begun by clearing out the area that once contained a par course over 10 years ago. The planting area of 2,600 square feet, 58 feet in diameter and 170 feet in circumference is now surrounded by a 6-foot-tall fence made of 2-by-2 inch wire, much like the one already located along the Camino Pablo side of the grounds, in order to have a cohesive appearance with the rest of the park.

Additional construction has seen a cardboard, biodegradable weed abatement layer installed; the placement of decorative boulders; and groundwork laid for a fountain. Soil has been delivered and took volunteers approximately two days to spread. Future work will include a new irrigation system; pathway placement; the construction of a pergola within the habitat; and five benches strategically placed around the outside of the fence. Planting is expected to begin April 24.

MGC has made considerable headway toward meeting its fundraising goal of \$35,000. The club is approaching 85% of its intended mark, but even if the goal is reached it would still fall short of including artwork in the garden. To that end, MGC plans on having sales of the nearly 1,100 milkweed plants they have propagated. The first sale (which will include other monarch nectar plants) takes place April 17, from 9 a.m. to 2 p.m. in conjunction with the Orinda Garden Club's sale located in the Orinda Library Plaza at 26 Orinda Way. Milkweed plants can also be purchased starting April 17 at the Moraga Garden Center, 1400 Moraga Rd., Wednesdays through Sundays from 9 a.m. to 5 p.m.

There are still some benches available for a donation purchase. Visit: www.moragagardenclub.com and click onto "Benches for Habitat" in the header. To make a cash donation, click onto the green box "Moraga for Monarchs" on the Home page. For more information on the project, email Moragaformonarchs@gmail.com.
